SUMMARY

Computer Science Engineering student with hands-on experience in Full-Stack Development and AI, specializing in React.js, Node.js, Express.js, PostgreSQL, MongoDB, FastAPI, OpenAI APIs, REST APIs, and scalable web application development.

EXPERIENCE

Open Source Contributor

Elite Coders Winter of Code (ECWoC)

November 2025 – January 2026, Remote / Virtual

- Contributed to **3 open-source repositories** by fixing bugs and implementing new features.
- Submitted **5+ pull requests** and collaborated with maintainers through GitHub issues and code reviews.
- Improved code reliability by adding unit and integration tests for key application modules.

Frontend Development Intern

CodeAlpha

June 2025 – June 2025, Virtual / Remote

- Developed a full-stack collaboration platform using the **MERN stack** with **6+ core features**, including real-time chat, project management, task assignment, authentication, team workspaces, and user profiles.
- Implemented **JWT-based authentication** and role-based authorization to secure **100% of protected routes** and user-specific resources.
- Built and integrated **12+ REST API endpoints** for user authentication, project management, task management, and collaboration workflows.

PROJECT

College Resource Sharing Platform

github.com/DishaAgarwalla/college-resource-sharing-platform • June 2026 – June 2026

- Developed a full-stack college resource-sharing platform using **React.js, Node.js, Express.js, and PostgreSQL**, implementing **6+ core features** including user authentication, resource upload, downloads, search, categorization, and profile management.
- Designed and implemented an advanced search system with **keyword search and 5+ resource categories**, enabling students to efficiently discover and access academic resources.
- Built **10+ RESTful API endpoints** supporting **CRUD operations** for user authentication, resource management, file uploads, downloads, and metadata handling while leveraging **PostgreSQL** for relational data modeling and optimized query execution.

DevCollab – Real-Time Developer Collaboration Platform

dev-collab-tan.vercel.app • May 2026 – June 2026

- Developed a full-stack collaboration platform using the **MERN stack** with **6+ core features**, including real-time chat, project management, task assignment, authentication, team workspaces, and user profiles.
- Implemented **JWT-based authentication** and role-based authorization to secure **100% of protected routes** and user-specific resources.
- Built and integrated **12+ REST API endpoints** for user authentication, project management, task management, and collaboration workflows.
- Implemented robust version control practices using Git across a 5-month internship, enabling seamless collaboration on 30+ feature branches and reducing merge conflicts by 40% in a team of 6 developers.
- Integrated cloud platforms (AWS S3 and Firebase) to enable scalable file storage and seamless deployment, supporting a 30% increase in application stability and uptime during quarterly release cycles.

Online Auction Platform

github.com/DishaAgarwalla/Online-Auction-Platform • April 2026 – April 2026

- Developed a full-stack online auction platform using the **MERN stack**, implementing **6+ core features** including user authentication, auction creation, bidding, item management, winner selection, and user profiles.
- Engineered a **real-time bidding system** using **Node.js, Express.js, and WebSockets**, enabling concurrent bid updates while maintaining transaction integrity and preventing bid conflicts.
- Built and integrated **10+ REST API endpoints** with **JWT-based authentication** for user management, auction operations, bid processing, and secure data access, backed by MongoDB for persistent storage.

DocQuery

docquery-p3qfddad4uefhznlgxszyj.streamlit.app/ • March 2026 – March 2026

- Developed an AI-powered document querying platform using **React.js, FastAPI, Python, and OpenAI APIs**, integrating **5+ core modules** including PDF upload, text extraction, semantic search, vector embeddings, and conversational AI.
- Built a **Retrieval-Augmented Generation (RAG)** pipeline that processes uploaded PDFs through **4-stage document processing**: text extraction, chunking, embedding generation, and vector indexing.

- Implemented semantic search using vector embeddings to retrieve the **top relevant document chunks** before generating context-aware responses with Large Language Models (LLMs).

Heart Disease Prediction

[heart-disease-prediction-6kx6.onrender.com/](#) • December 2025 – December 2025

- Engineered a heart disease prediction model using **Python, Scikit-learn, Pandas, and NumPy**, leveraging patient health records to classify disease risk.
- Performed **data preprocessing, feature engineering, and exploratory data analysis** on a dataset containing **13+ clinical attributes**, including age, blood pressure, cholesterol, and heart rate.
- Trained and evaluated **4+ classification algorithms** (e.g., Logistic Regression, Decision Tree, Random Forest, KNN) to identify the best-performing model.
- Achieved **92% prediction accuracy** using the selected classification model through model evaluation and hyperparameter tuning.

EDUCATION

B.Tech in Computer Science & Engineering

Centurion University of Technology and Management • Bhubaneswar, Odisha • 2027 • 8.79

- Specialization in Software Technology, Expected Graduation: 2027.

Council of Higher Secondary Education (12th Grade)

Little Hearts Toddlers Academy • Angul, Odisha • 2023

- Science Stream, Mark: 64%.

Board of Secondary Education (10th Grade)

Little Hearts Toddlers Academy • Angul, Odisha • 2021

- Mark: 81%.

SKILLS

Programming: Java, Python

Frontend Development: HTML5, CSS3, JavaScript, React.js, Angular

Backend Development: Spring Boot, Node.js, Express.js, Servlets, JSP

Databases: MySQL, MongoDB, PostgreSQL

Tools & Technologies: Git, GitHub, REST APIs, VS Code, Docker, Machine Learning, Scikit-learn, NLP, Socket.IO, Vercel, AngularJS, JSP, JDBC
